

A

Main Idea (heading):

what are living things made of

① Detail (subheading)

living things are made up of one or more cells

Specifics:

☆ basic part of all living things is the cell

☆ most cells are so small they can only be seen with a microscope

☆ _____

② Detail (subheading)

an organism is any single living thing

Specifics:

☆ organisms have different sizes and shapes

☆ some are many celled

☆ some are one celled

③ Detail (subheading)

organism as a whole carries out life activities

Specifics:

☆ many celled organisms have cells which carry out certain activities, cells depend on each other

☆ _____

☆ one celled organism is a complete living thing, cell carries out all activities of life - moves, responds, grows

Lesson/Chapter/Unit Connections

This lesson is important to the chapter/unit because all living things are made up of one or more cells. An organism is any single living thing. They have different shapes and sizes and can be many-celled or one-celled. An organism carries out life activities such as moving, responding, and growing. One-celled organisms carry out all activities while many-celled organisms have cells which carry out certain activities and depend on each other.

B

Main Idea (heading):

What is a kingdom of living things?

① Detail (subheading)

organisms are classified into 5 large groups called kingdoms

Specifics:

☆ a kingdom is made up of living things

☆ the living things have some traits in common

☆ _____

② Detail (subheading)

Five Kingdoms

Specifics:

☆ animals are in the animal kingdom

☆ plants are in the plant kingdom

☆ simple living things are in protists, fungi, and monerans

③ Detail (subheading)

Specifics:

☆ _____

☆ _____

☆ _____

Lesson/Chapter/Unit Connections

This lesson is important to the chapter/unit because organisms are organized in five, large groups called kingdoms. Kingdoms are living things that have some traits in common. Three of the five kingdoms are made up of simple living things: protists, fungi, and monerans.
